

Mohasin Mudassar | CLOUD & PLATFORM ENGINEER

📍 Germany | 📞 +49-15560494924

✉ Email: mohasin.mudassar.official@gmail.com | 🔗 LinkedIn | 🐙 Github

Cloud & DevOps Engineer with 3+ years of experience building and operating cloud platforms on AWS and Azure using Terraform, Kubernetes, and GitOps. Worked with customers to design cloud solutions, automate deployments, and supported 10+ production environments.

SKILLS

Cloud Platforms: AWS (EC2, S3, VPC, IAM, EKS, RDS, Lambda), Azure (AKS, VMs, VNets, Storage)

CI/CD & GitOps: GitHub Actions, Jenkins, Argo CD, GitOps

Containers & Orchestration: Docker, Kubernetes

Infrastructure as Code: Terraform, Ansible

Monitoring & Observability: Datadog, Grafana, CloudWatch, Zabbix, Pagerduty, SLO/SLI Monitoring, Incident Response

Security & IAM: AWS IAM, Least-Privilege Access, OAuth2, OIDC, Keycloak, SSO

Deployment & Release: Blue-Green, Canary, Rolling Deployments

Programming & Scripting: Python, Bash, YAML

Systems & Networking: Linux, NGINX (reverse proxy, load balancing), TCP/IP fundamentals

Databases: PostgreSQL, MySQL, MongoDB, Cassandra

Tools & Collaboration: Git, Jira, Confluence, Agile/Scrum

WORK EXPERIENCE

Cloud & DevOps Engineer, Innovixia

09/2024 – 06/2026 | Remote, Germany

- Standardized AWS and Azure infrastructure by developing reusable Terraform modules for EC2, VPC, EKS, and AKS across 10+ environments, reducing environment setup time from hours to minutes.
- Reduced a client's monthly AWS spend by approximately 25–30% through utilization-based rightsizing, scheduled non-production shutdowns, and controlled cleanup of idle resources.
- Automated rolling and blue-green Kubernetes deployments using GitHub Actions, Jenkins, Argo CD, and GitOps, reducing release-cycle time by 35% across 8+ environments.
- Collaborated with 5+ customers to gather requirements and design scalable AWS and Azure cloud architectures for production platforms.
- Improved incident response by implementing observability with Datadog and Grafana, reducing detection time by 40% and MTTR by 25% through custom alerting and monitoring dashboards.
- Implemented least-privilege IAM controls and integrated Keycloak-based SSO across 6+ applications, strengthening platform security and access governance.
- Investigated 15+ production incidents across deployment and infrastructure layers, collaborating with development teams on RCA, mitigation, and long-term reliability improvements.

Software Systems & DevOps Engineer, Xgrid

05/2023 – 06/2024 | Islamabad, Pakistan

- Deployed and operated a production-grade microservices-based application (10+ services) on AWS using Terraform (EC2, RDS, Cognito, Route 53, ECS), enabling scalable and repeatable infrastructure delivery.
- Engineered automated delivery pipelines for microservices using GitHub Actions and Jenkins, enabling rolling and canary releases, reducing release cycles from 5 days to 3 days.
- Achieved 99% SLO compliance with MTTA under 1 minute and MTTR under 1 hour by optimizing Datadog, Sumo Logic, and CloudWatch observability pipelines.
- Reduced unplanned downtime by automating Cassandra recovery, backup, and maintenance workflows, cutting manual recovery effort from hours to minutes.
- Improved AWS security and governance by implementing least-privilege IAM policies, S3 encryption, VPC segmentation, and multi-account controls using AWS Organizations and Control Tower.

Associate DevOps Engineer, Autosphere

01/2023 – 05/2023 | Islamabad, Pakistan

- Collaborated with development and QA teams to build Jenkins and GitHub Actions pipelines for 5+ services, improving deployment consistency across environments.
- Standardized configuration management using Ansible and Bash scripting, reducing manual system setup effort by 25%.
- Integrated Zabbix monitoring, improving infrastructure visibility and enabling early detection of critical issues.

PROJECTS

Projects source code available on GitHub: github.com/mohasinmudassar

Kubernetes GitOps Platform on AWS EKS — Terraform & Argo CD

- Designed and deployed an AWS EKS cluster using Terraform, reducing provisioning time from hours to under 30 minutes.
- Delivered GitOps-based deployments using Argo CD, enabling declarative releases and reliable rollbacks.
- Configured Ingress NGINX and AWS load balancing to ensure high availability across 3+ services with 99% uptime.

AWS Cost Optimization & Governance System — Python, Lambda & Terraform

- Built an AWS cost-governance workflow using four Terraform-provisioned Lambda functions with least-privilege IAM to identify idle EC2 instances, load balancers, and NAT gateways across all regions.
- Identifies resource owners through tags or CloudTrail and provides 7 days notification period before opening a Terraform pull request, avoiding automatic resource deletion.

CERTIFICATIONS

AWS Certified Solutions Architect – Associate  03/2026

EDUCATION

Masters in International Software Systems Science - Otto-Friedrich-University 04/2024 - Present | Bamberg, Germany
Bachelors in Computer Science - Comsats University Islamabad 08/2018 - 10/2022 | Islamabad, Pakistan

LANGUAGES

- English — C1 (Professional Proficiency)
- German — A2 (Conversational)
