Mohasin Mudassar | Cloud & DevOps Engineer

Germany | +49-15560494924
Email: mohasin.mudassar.official@gmail.com | Linkedin | Github

Cloud & DevOps Engineer with 3+ years of experience building and operating cloud platforms on AWS and Azure using Terraform, Kubernetes, and GitOps. Worked directly with startup clients to design cloud solutions, automate deployments, and run LLM workloads on Kubernetes and GPUs across 10+ environments.

Work Experience

Teaching Assistant, DevOps for AI, University of Bamberg (Part-time) *10/2026 – Present | Bamberg, Germany*

- Run weekly exercise sessions for 40+ bachelor's students on containers, CI/CD and deploying ML models, with a focus on good practice for AI infrastructure.
- Help students work through problems in their exercises and get stuck setups running.
- Work with the professors on preparing and updating the lecture content.

Cloud & DevOps Engineer, Innovixia (Part-time) *09/2024 – 06/2026 | Remote, Germany*

- Standardized AWS and Azure infrastructure by developing reusable Terraform modules for EC2, VPC, EKS and AKS across 10+ environments, reducing environment setup time from hours to minutes.
- Automated rolling and blue-green Kubernetes deployments with GitHub Actions, Jenkins and Argo CD (GitOps), reducing release-cycle time by 35% across 8+ environments.
- Debugged LLM inference pods on Kubernetes that kept getting OOMKilled, where each restart cost 4–5 minutes of model reload from S3. The cause was memory growth past the pod limits. On shared NVIDIA GPUs, put a semaphore around inference so concurrent requests no longer ran VRAM out of memory.
- Co-built a guarded AI coding workflow on AWS. A Jira webhook passes a cleaned-up ticket to a Bedrock agent, whose Lambda-backed tools can only create feature branches and draft merge requests in GitLab, and engineers review and merge.
- Reduced a client's monthly AWS spend by approximately 25–30% through utilization-based rightsizing, scheduled non-production shutdowns, and a Lambda-based scanner that cleans up idle resources.
- Worked 15+ production incidents through to root cause with client development teams, and added the Datadog dashboards and PagerDuty alerting that cut detection time by about 40% and MTTR by about 25%.
- Advised 5+ startup clients directly on target architectures, among them EKS and AKS migrations and a multi-region setup that keeps each tenant's data in its home region. Rolled out Keycloak SSO across 6+ of their applications.

Software Systems & DevOps Engineer, Xgrid *05/2023 – 06/2024 | Islamabad, Pakistan*

- Provisioned and operated AWS infrastructure for an IoT device platform with Terraform (ECS, RDS, Cognito, Route 53), with device traffic flowing through Device Gateways into Kafka and a multi-AZ Cassandra cluster.
- Built the CI/CD pipelines in GitHub Actions and Jenkins for 10+ services and introduced canary releases, shortening the release cycle from 5 days to 3.
- Recovered a Cassandra node that had run out of inodes with no data loss. With SSH unusable, removed the node from the ring, freed the inodes by mounting its EBS volume on a rescue instance, and rejoined it to the cluster.
- Trimmed AWS capacity based on Datadog and CloudWatch data, rightsized instances, removed Device Gateways a few at a time while watching device connectivity, and shut down non-production environments at weekends.
- Held 99% SLO compliance while handling PagerDuty alerts with Datadog, Sumo Logic and CloudWatch, and set up least-privilege IAM, VPC segmentation and multi-account governance with AWS Organizations and Control Tower.

Associate DevOps Engineer, Autosphere *01/2023 – 05/2023 | Islamabad, Pakistan*

- Collaborated with development and QA teams to build Jenkins and GitHub Actions pipelines for 5+ services, improving deployment consistency across environments.
- Standardized configuration management using Ansible and Bash scripting, reducing manual system setup effort by 25%.
- Integrated Zabbix monitoring, improving infrastructure visibility and enabling early detection of critical issues.

Education

Masters in International Software Systems Science - Otto-Friedrich-University *04/2024 - Present | Bamberg, Germany*
Bachelors in Computer Science - Comsats University Islamabad *08/2018 - 10/2022 | Islamabad, Pakistan*

Skills

Cloud: AWS (EKS, ECS, EC2, VPC, IAM, RDS, Lambda, DynamoDB, Route 53, EventBridge, CloudTrail, Bedrock, Organizations, Control Tower), Azure (AKS, VNets, ACR)

Infrastructure as Code & GitOps: Terraform, Ansible, Argo CD

Containers & CI/CD: Kubernetes, Docker, GitHub Actions, Jenkins, GitLab; rolling, blue-green and canary releases

AI infrastructure: LLM inference on Kubernetes, NVIDIA GPU workloads, vLLM, Amazon Bedrock Agents, RAG

Observability & SRE: Datadog, Grafana, CloudWatch, Sumo Logic, PagerDuty, SLOs/SLIs, incident response, RCA

Security: least-privilege IAM, Keycloak, OAuth2/OIDC, SSO, VPC segmentation

Linux & networking: Linux, Bash, NGINX, DNS, load balancing, TCP/IP

Programming & data: Python, PostgreSQL, MySQL, Cassandra, Kafka

Cost & ways of working: FinOps, cost optimization, Git, Jira, Confluence, Agile/Scrum

Projects

Projects source code available on GitHub: github.com/mohasinmudassar

AWS Cost Optimization & Governance System — Python, Lambda & Terraform

- Built an AWS cost-governance workflow using four Terraform-provisioned Lambda functions with least-privilege IAM to identify idle EC2 instances, load balancers, and NAT gateways across all regions.
- Identifies resource owners through tags or CloudTrail and provides 7 days notification period before opening a Terraform pull request, avoiding automatic resource deletion.

Certifications

AWS Certified Solutions Architect – Associate *03/2026*

Languages

- English — C1 (Professional Proficiency)
- German — B1
